A stamen (Structure of Stamen)
In angiosperm, the male reproductive part is Androecium. It consists of stamen. Each stamen is a modified leaf or microsporophyll. Each stamen consists of 3 parts - filament, anther and connective.

- ◆ Filament is basal, slender stalk at the apex of it sac like fertile or gynoecious part anther is present.
- ◆ Each anther has two anther lobes (bithecous) and each lobe usually contain two pollen sacs or micro-sporangia filled with pollen grains or microspores. The anther with one lobe is called monothecous anther.
- ◆ Two lobes of anther are connected together by sterile narrow strip of parenchymatous tissue called as connective.

Labels in diagram: Anther, Connective, Filament, Dorsal View, Ventral View, Pollen chamber.
